Procedure for disposal of solvents / chemical waste:

When your lab has chemical waste ready to be taken to the chemical waste storage room, please contact one of the above representatives.

Your representative will check your waste container(s) to make sure the following information is on the container. Containers with incorrect information will not be accepted. Unstable containers will not be accepted.

- a) Name of lab
- b) Name of lab manager
- c) Room number
- d) Telephone local
- e) **Full** name of chemical in waste container, no abbreviations will be accepted.

There may be a charge to your department for pick-up of the following: hazardous gases, explosive chemicals and unknown chemicals.

Log each bottle/container onto the **Solvent / Chemical Waste Disposal Log** sheet located in the chemical waste room (JBRC room 113), and place a yellow sticker on the bottle/container and number it with the corresponding number on the log sheet.

Store the chemical waste container(s) in the appropriate cabinet with compatible chemicals only.

Sumas Environmental Services will empty your re-usable (Red Jerrycan) container(s) into one of the drums on their truck, and return the clean containers to room 113 for your reuse.
