Technology is exploding at a rapid pace and presents exciting opportunities to change the way that we interact with the world. How can we ride this wave of technological change and leverage these new strategies to shape the face of health care, and in particular, mental health? On December 9 and 10, we open the floor to discussion at E-Mental Health Conference 2013.

Our current health care system lacks the capacity to meet the demand for mental health support in the traditional manner. E-mental health offers a real opportunity to dramatically increase access to services and improve the quality of care for those needing mental health support.

We will show how web-based mental health services have overtaken our dreams for telehealth in the 90’s to improve the way we exchange knowledge and communicate. From virtual reality to the use of avatars, and online networks to virtual clinics, we invite you to discuss how we can best integrate these new tools into practice.

—Dr. Michael Krausz

Child & Family Research Institute
Chan Auditorium/Chieng Atrium
950 West 28th Avenue
Vancouver, BC, Canada

Register before October 31 for Early Bird Pricing:
$50 for the 2-day event
$75 after October 31
Special $20 student rate
